Theory of Colours

Johann Wolfgang von Goethe

Translated with Notes by Charles Lock Eastlake

The wavelength theory of light and color had been firmly established by the time the great German poet published his *Theory of Colours* in 1810. Nevertheless, Goethe believed that the theory derived from a fundamental error, in which an incidental result was mistaken for a elemental principle. Far from affecting a knowledge of physics, he maintained that such a background would inhibit understanding. The conclusions Goethe draws here rest entirely upon his personal observations.

This volume does not have to be studied to be appreciated. The author's subjective theory of colors permits him to speak persuasively of color harmony and aesthetics. These notions may evoke a positive response on their merits, but even among those who regard them as pure fantasy, the grace and style of Goethe's exposition provide abundant rewards. Although his scientific reasoning on this subject has long since been dismissed, modern readers continue to appreciate the beauty and sweep of Goethe's conjectures regarding the connection between color and philosophical ideas. In addition, he offers insights into early nineteenth-century beliefs and modes of thought as well as a taste of European life during the Enlightenment.

Dover (2006) unabridged republication of *Goethe's Theory of Colours*, John Murray, London, 1840.

Contents

Translator's Preface	xi
Preface to the First Edition of 1810	xvii
Introduction	xxv

PART I.

PHYSIOLOGICAL COLOURS.

Chapter	Page
I. Effects of Light and Darkness on the Eye	2
II. Effects of Black and White Objects on the Eye	3
III. Grey Surfaces and Objects	8
IV. Dazzling Colourless Objects	9
V. Coloured Objects	11
VI. Coloured Shadows	16
VII. Faint Lights	21
VIII. Subjective Halos	23
Pathological Colours—Appendix	25

PART II.

PHYSICAL COLOURS.

IX. Dioptrical Colours	33
X. Dioptrical Colours of the First Class	33
XI. Dioptrical Colours of the Second Class—Refraction	41
Subjective Experiments	44
XII. Refraction without the Appearance of Colour	44
XIII. Conditions of the Appearance of Colour	44
XIV. Conditions under which the Appearance of Colour increases	47
XV. Explanation of the foregoing Phenomena	50
XVI. Decrease of the Appearance of Colour	55
XVII. Grey Objects displaced by Refraction	56

Chapter	Page
XVIII. Coloured Objects displaced by Refraction	58
XIX. Achromatism and Hyperchromatism	65
XX. Advantages of Subjective Experiments— Transition to the Objective	67
Objective Experiments	68
XXI. Refraction without the Appearance of Colour	69
XXII. Conditions of the Appearance of Colour	70
XXIII. Conditions of the Increase of Colour	73
XXIV. Explanation of the foregoing Phenomena	76
XXV. Decrease of the Appearance of Colour	77
XXVI. Grey Objects	77
XXVII. Coloured Objects	78
XXVIII. Achromatism and Hyperchromatism	79
XXIX. Combination of Subjective and Objective Experiments	80
XXX. Transition	82
XXXI. Catoptrical Colours	84
XXXII. Paroptical Colours	89
XXXIII. Epoptical Colours	96

PART III.

CHEMICAL COLOURS.

XXXIV. Chemical Contrast	110
XXXV. White	111
XXXVI. Black	112
XXXVII. First Excitation of Colour	112
XXXVIII. Augmentation of Colour	115
XXXIX. Culmination	117
XL. Fluctuation	118
XLI. Passage through the Whole Scale	119
XLII. Inversion	120
XLIII. Fixation	120
XLIV. Intermixture, Real	122
XLV. Intermixture, Apparent	123
XLVI. Communication, Actual	125
XLVII. Communication, Apparent	128
XLVIII. Extraction	129
XLIX. Nomenclature	131
L. Minerals	133
LI. Plants	134

Chapter	Page
LII. Worms, Insects, Fishes	137
LIII. Birds	140
LIV. Mammalia and Human Beings	142
LV. Physical and Chemical Effects of the Transmission of Light through Coloured Mediums	144
LVI. Chemical Effect in Dioptrical Achromatism	147

PART IV.

GENERAL CHARACTERISTICS.

The Facility with which Colour appears	149
The Definite Nature of Colour	150
Combination of the Two Principles	151
Augmentation to Red	151
Junction of the Two Augmented Extremes	152
Completeness the Result of Variety in Colour	153
Harmony of the Complete State	153
Facility with which Colour may be made to tend either to the Plus or Minus side	154
Evanescence of Colour	154
Permanence of Colour	154

PART V.

RELATION TO OTHER PURSUITS.

Relation to Philosophy	155
Relation to Mathematics	156
Relation to the Technical Operations of the Dyer	158
Relation to Physiology and Pathology	159
Relation to Natural History	160
Relation to General Physics	160
Relation to the Theory of Music	163
Concluding Observations on Terminology	164

PART VI.

EFFECT OF COLOUR WITH REFERENCE TO MORAL ASSOCIATIONS.

Yellow	168
Red-Yellow	169
Yellow-Red	170
Blue	170
Red-Blue	171
Blue-Red	172

Chapter	Page
Red	172
Green	173
Completeness and Harmony	174
Characteristic Combinations	176
Yellow and Blue	176
Yellow and Red	177
Blue and Red	177
Yellow-Red and Blue-Red.	177
Combinations Non-Characteristic	178
Relation of the Combinations to Light and Dark	178
Considerations derived from the Evidence of Experience and History.	179
Æsthetic Influence	181
Chiaro-Scuro.	181
Tendency to Colour	183
Keeping	184
Colouring	185
Colour in General Nature.	185
Colour of Particular Objects	185
Characteristic Colouring	186
Harmonious Colouring	187
Genuine Tone	188
False Tone	188
Weak Colouring	188
The Motley	189
Dread of Theory.	189
Ultimate Aim	189
Grounds	190
Pigments	191
Allegorical, Symbolical, Mystical Application of Colour.	192
Concluding Observations	194

OUTLINE

OF A

Theory of Colours

“Si vera nostra sunt aut falsa, erunt talia,
licet nostra per vitam defendimus.
Post fata nostra pueri qui nunc ludunt nostri iudices erunt.”
